

## Customer Information

### Change Notification Mounting Hardware

Dear Customer,

Kathrein are pleased to announce a modified portfolio of mounting hardware for Kathrein antenna products.

With this modification the design is slightly changed, but the modified mounting hardware is absolutely compatible to the current portfolio. Therefore the well known article numbers for this portfolio will not be changed. We will complete the portfolio with some new devices. About the products you had been already informed in separate customer information.

Furthermore the antenna products are from now on divided into different categories (light, medium and heavy). This differentiation is depending on the respective wind load of the antenna. The mounting hardware is also divided into these categories.

With these changes the following advantages could be achieved:

- avoiding a wrong application
- different mounting interfaces for each category
- better handling
- less weight

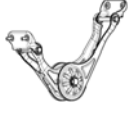

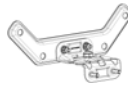

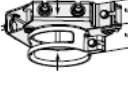

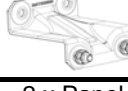

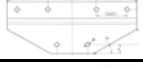

On page two you can find a summary of the adapted product line of mounting parts. The detailed information will also be included in the catalogue issue 2011.

From January 2011 on we will start to introduce the changed program.

Best regards

Stefan Reichelt  
Product Manager  
Mobile Communication Systems
